Dear Ujwala,

As discussed, please find attached the reviewed syllabus for your info. The topics highlighted in YELLOW are the areas where we have projects on-going and there is a possibility that your students can work.

The topic highlighted in GREEN is something where I would personally prefer having some students who could help us develop a risk based models for quantitative evaluation and assessment of GMP compliance system in accordance with various regulatory guidelines/ regulations. However, these students must have high logical reasoning, proficiency in MS Excel (particularly having knowledge and capability of macro's and VB) and strong desire of creating a robust and quantitative GMP compliance evaluation model. This model has capability of transforming into a product having huge commercial value.

Looking forward to hear from you soon.

Thanks and with my best Regards
Manish Bhatkar
